Calculator Using Angular JS

<u>Ques 1|</u> Create a calculator app using Angular which is capable of performing following operations:

- 1. Addition of two numbers
- 2. Subtraction of two numbers
- 3. Multiplication of two numbers
- 4. Division of two numbers
- 5. Factorial of a number
- 6. Checking if a given number is Prime or not

Note: Use as many components as you can. Upload following in your pdf file:

- 1. Name, Registration Number
- 2. Code of all your components
- 3. Screenshot of your app

Solution:

root component app-root, its child component calculator and calculator's child component calculator-keys.

APP COMPONENT

app-component.html

```
<app-calculator></app-calculator>
```

app-component.ts

```
import { Component } from '@angular/core';

@Component({
    selector: 'app-root',
    templateUrl: './app.component.html',
    styleUrls: ['./app.component.css']
})
export class AppComponent {
    title = 'calc-app';
}
```

app.module.ts

```
import { NgModule } from '@angular/core';
import { BrowserModule } from '@angular/platform-browser';
import { AppComponent } from './app.component';
import { CalculatorComponent } from './calculator/calculator.component';
import { CalculatorKeysComponent } from './calculator-keys/calculator-
keys.component';
@NgModule({
  declarations: [
    AppComponent,
    CalculatorComponent,
    CalculatorKeysComponent
  ],
  imports: [
    BrowserModule
  1,
  providers: [],
  bootstrap: [AppComponent]
})
export class AppModule { }
```

CALCULATOR COMPONENT

calculator.component.html

```
<div class="calculator">
  <app-calculator-keys></app-calculator-keys>
</div>
```

calculator.component.spec.ts

```
import { ComponentFixture, TestBed } from '@angular/core/testing';
import { CalculatorComponent } from './calculator.component';
describe('CalculatorComponent', () => {
 let component: CalculatorComponent;
 let fixture: ComponentFixture<CalculatorComponent>;
